E-commerce Sales Analysis

Developer Arena Week 4 | Project Report

Objective

Analyze the provided sales dataset to identify product performance, monthly trends, and regional sales contribution.

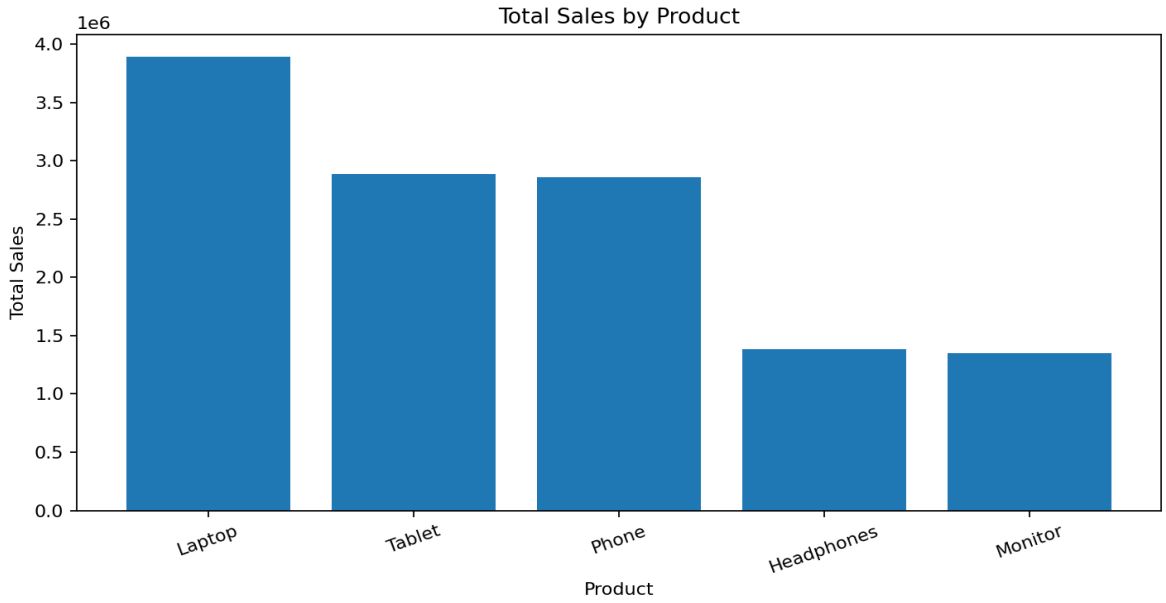

Dataset and method

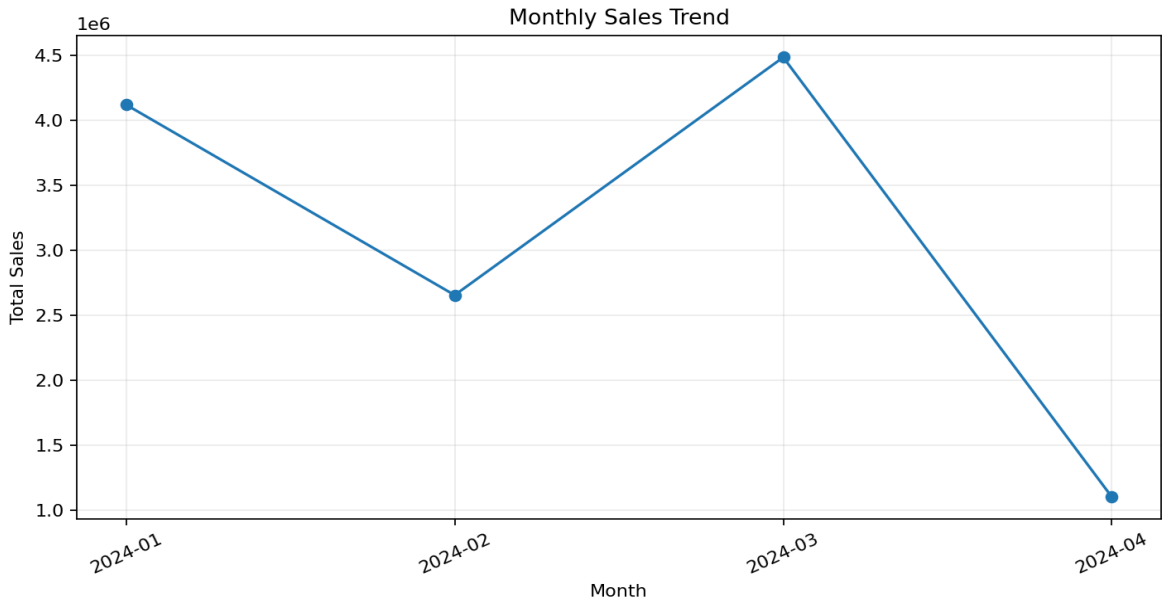

The dataset contains 100 rows and 7 columns. The project uses Python and Pandas for data handling and Matplotlib for visualization. Data was checked for missing values, duplicate rows, and invalid numeric values.

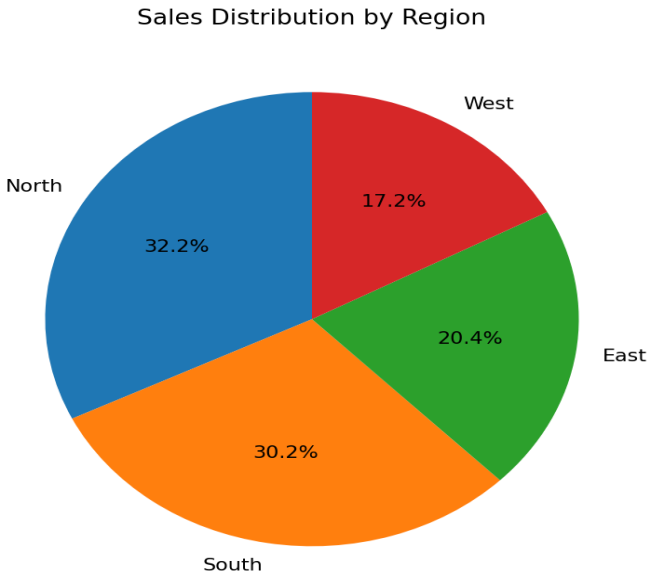

Key findings

Metric	Result
Records analyzed	100
Total sales	12,365,048
Top product	Laptop (3,889,210)
Leading region	North (3,983,635)
Strongest month	2024-03 (4,485,006)

Visualizations

Conclusion

The provided dataset indicates that Laptop contributes the most sales and North is the strongest region. These findings can guide further descriptive analysis. The dataset does not contain costs, profit, discounts, or returns, so profitability cannot be assessed.
